

# Developing Web Applications Using Node.js

**Course #:** NJS-100      **Duration:** 2 days

## Prerequisites

Advanced JavaScript Programming

## Details

Developing Web Applications Using NodeJS is a two-day instructor-led course that teaches students how to build server-side web applications using open source JavaScript frameworks and powered by NodeJS.

Students will learn how to create and test modern web applications and APIs using open-source JavaScript modules, NodeJS, and MongoDB.

## Software Needed

Text Editor

## Outline

### Developing Web Applications Using Node.js

- **Setting up Node.js and Other Essentials**
  - Installing Node.js and NPM
  - Launching Node.js Scripts
  - Node.js Basics and Syntax
  - Node.js Core Modules
  - Handy Node.js Utilities
- **Node Package Manager**
  - Installing a Package
  - Global Packages
  - Updating Packages
  - Creating Packages
- **Using Express.js to Create Node.js Web Apps**
  - Installing Express.js
  - Express.js Scaffolding

- Setting Up Folders and Configuration
- **TDD and BDD**
  - Installing and Understanding Mocha
  - TDD with Assert
  - BDD with Expect.js
- **Persistence with MongoDB and Mongoose**
  - Installing and Running MongoDB
  - Data Manipulation from the Mongo Console
  - Native MongoDB Driver for Node.js
  - Main Mongoose Methods
- **Boosting Data with Mongoose ORM Library**
  - Installing Mongoose
  - Mongoose Schemas
  - Mongoose Models
  - Relationships and Joins
  - Express.js + Mongoose = True MVC
- **Using Sessions and OAuth in Node.js Apps**
  - Authorization with Express.js
  - Token-Based Authentication
  - Session-Based Authentication
  - Node.js OAuth
- **Building Node.js REST API Servers**
  - RESTful API Basics
  - Test Coverage with Mocha and Superagent
  - REST API Server Implementation with Express and Mongoose
